Periodic Test-3 (2023-24)

English

Class : 6 A / B / C

Date : 13/02/2024

No of pages-3

Marks : 30

Time : 1 hr

Reading Time : 8-8.10am

General Instructions: This paper contains three sections. All sections are compulsory.

Section A – Reading – 5 marks

Section B – Writing & Grammar – 15 marks

Section C – Literature – 10 marks

Section A- Reading

I. Read the passage given below and answer the questions that follow:

1. The extinction of species, that is, our flora and fauna is nothing new for the planet, but the rate of extinction has increased at an alarming pace. Sadly, we have played a major role in the process. It has been estimated that some 50,000 plants and animal species will become extinct every year in the coming decades. The loss of insects and microorganisms cannot be calculated. The destruction of our ecosystem is so alarming that as many as 60,000 plant species are expected to be lost by the year 2025.
2. However, according to the Centre for Biological Diversity, 'Unlike past mass extinctions caused by events like asteroid strikes, volcanic eruptions and natural climate shifts, the current crisis is almost entirely caused by us – humans. Ninety-nine per cent of currently threatened species are at risk from human activities, primarily those driving habitat loss, introduction of exotic species and global warming.'
3. The habitats are often destroyed because of destructive changes to environments. These could either be attributed to natural phenomena such as floods, volcanoes and hurricanes or human activities such as construction, deforestation, changing land use for agriculture and artificial land drainage. Hunting and poaching of rare plants and animals is a significant cause of extinction and represents a major or dominant factor in the decline of certain species.
4. The introduction of plant and animal species that are not native to a given area may upset the balance of the local ecosystem. Pollution is yet another cause of extinction and may impact entire ecosystems. For example, the pesticide DDT had a catastrophic impact on our ecology. The spread of disease may be both a natural and human factor behind the extinction of species.

Questions:

(1×5=5)

1. Why is the extinction of species a cause for alarm?
2. How did extinction take place earlier?
3. How is the next mass extinction likely to happen?
4. Complete the statement: *The habitats are often destroyed because of _____*
5. Find the synonym of the word- **destruction** from the above lines. (paragraph-5)
